APPLICATION:
SNOW WING INSTALLATION / REMOVAL

OVERVIEW

The RF Wingmaster is designed for grader operators who value safety, speed, and simplicity. It connects the arm handler and wing stand, reducing snow wing installation and removal from hours to minutes. Using minimal tools and no extra personnel, it helps operators work safer and more efficiently every shift.

Created by a grader operator for grader operators, the RF Wingmaster eliminates the need for chains, loaders, skid steers, and cranes. The wing stays on the ground throughout installation, improving safety, reducing strain, and protecting equipment from unnecessary wear.

With a setup time of about 30 minutes, each operator can handle their own attachment confidently, cutting downtime and keeping operations moving smoothly all winter. The result is a safer, more streamlined workflow that boosts productivity and protects both people and machines.

FEATURES

FASTER INSTALLATION

Reduces snow wing installation and removal from hours to minutes with minimal tools. Designed for single-operator efficiency, it ensures fast, reliable setup, keeping fleets productive and operations moving even in the toughest winter conditions.

SAFETY FIRST

Secures the wing on the ground during connection and removal, eliminating risks from suspended loads. Reduces the need for extra machinery, creating a safer, cleaner work environment and minimizing injury hazards for every operator.

OPERATOR BUILT

Developed by a grader operator with real-world experience, every detail prioritizes ease, safety, and reliability. Designed to handle the daily demands of snow maintenance, it delivers practical solutions that improve efficiency and reduce operator stress.

BUILT STRONG

Heavy-duty materials and precise construction ensure the RF Wingmaster withstands rigorous municipal and commercial snow operations. Engineered for long-term durability, it delivers consistent performance with minimal maintenance season after season.
